Letter to the Government of Cyprus

11 May 2007

H.E. The Foreign Minister
Nicosia
Republic of Cyprus

Dear Foreign Minister

The XXX Antarctic Treaty Consultative Meeting, assembled in New Delhi, two weeks ago has been advised of a proposal by a Cypriot-based company, Louise Cruise Lines, to conduct an Antarctic tourism expedition in the 2007/08 austral summer.

This proposed expedition reportedly involves the use of a very large tourist vessel with the capacity to carry approximately 1200 passengers. Further, it is reported that the expedition intends to disembark passengers onto land. If so, this would be the first occasion on which such a very large cruise liner has sought to do this within the Antarctic Treaty area (area south of 60 South Latitude, as described under Article 6 of the 1959 Antarctic Treaty).

The Antarctic Treaty Consultative Parties are currently discussing concerns about the potential environmental, safety, search and rescue and other implications of the use of large tourist ships in the Antarctic Treaty area. Delegations from over 40 nations attended and participated in the most recent Antarctic Treaty Consultative Meeting, and have adopted a Resolution discouraging the landing of passengers from vessels carrying more than 500 passengers. Current Antarctic tourism industry standards also discourage landings from large ships in order to limit adverse impacts on the Antarctic environment and to safeguard life at sea.

In view of this, the Meeting wished to inform you that Antarctic Treaty Consultative Parties have, since 1991, developed a legal framework and policy guidelines in relation to Antarctic tourism activities, including:

- The 1991 Protocol on Environmental Protection to the Antarctic Treaty;
- The guidelines attached to Recommendation XVIII-1 (1994);
- Measure 4 (2004);
- Resolution 4 (2004); and
- Resolution 4 (2007) Ship-based Tourism in the Antarctic Treaty Area.

These materials are attached for your consideration.

Accordingly, consistent with our obligations under Article X of the *Antarctic Treaty* and Article 13 paragraphs 2 and 5 of its Protocol on Environmental Protection, the Parties respectfully request that you consider taking whatever measures are within your competence to discourage activities that may be inconsistent with the above legal framework and policy guidelines.

Should you wish to discuss these matters or obtain any further information about the Antarctic Treaty, which is open to accession by all States, representatives of the Consultative Parties will be pleased to put themselves at your disposal. A list of the Consultative Parties and their national contact

IV. ADDITIONAL DOCUMENTS

points is enclosed. Further information about the Antarctic Treaty is also available on the Antarctic Treaty Secretariat website (www.ats.aq).

Yours faithfully

(signed)

Dr U.R. Rao
Chairman XXX Antarctic Treaty Consultative Meeting

The SCAR Lecture

Climate Change and the Antarctic: What Next?

Chris Rapley, President of SCAR, gave the SCAR Lecture. Earth's atmosphere, ocean, ice, biosphere, humans and solid earth interact through multiple interconnections, some highly nonlinear, and operate at a vast spread of spatial and temporal scales. Thus, understanding Earth processes poses a considerable scientific challenge. We have to take a "systems" view and consider the planet as a whole. International cooperation and coordination are essential.

Humans now constitute a force at the global scale. The product of burning fossil fuels is an increased loading of carbon in the atmosphere as the "greenhouse gas" carbon dioxide. The increase is dramatic. Annual human emissions of carbon rose from a few million metric tons in 1850 to 7 Gigatons (GtC) today (the CO₂ tonnage is 3.67 times greater), with total of 500GtC of carbon emitted. There is more carbon dioxide in the atmosphere than at any time over the past 860k years. It enhances the natural "Greenhouse Effect", which keeps the planet warmer than it would otherwise be by around 30°C. As a result the land surface has warmed by 0.7°C since 1900. The polar regions have warmed by up to 5 times the average because melting snow and ice expose rock and water, which absorb radiation and so amplify warming.

Warming of the Antarctic Peninsula over the last 40 years has pushed nearly 90% of the glaciers into retreat. Surface melting on ice shelves has caused water to pour down through cracks, damaging their structure and making them collapse. Collapsing ice shelves free formerly dammed glaciers, which now flow faster. A warming ocean is making the grounding line retreat in West Antarctica, which may result in a complete discharge of ice there. "How Much?" and "How Quickly?" The answer depends on knowing how water at the glacier bed will affect glacier flows. Current numerical models of ice sheets are inadequate to predict the speed or nature of such discharges.

Ice cores show that when the world was warmer, sea levels rose. The potential sea level rise from the ice sheets on Greenland is 7m and on West Antarctica is 5-6m. The rate of sealevel rise increased from 20cm/century to 30cm/century in the last decade. During the past 10,000 years it reached 1m/century; sometimes faster. This, plus evidence for higher sealevels in the last interglacial, suggests what might be possible in a warmer world. The IPY will address the contribution to sea level rise of the major ice sheets. Future sea level rise may affect the lives of millions and massively damage infrastructure.

Many scientists think we should stabilise the CO₂ concentration of the atmosphere at 450ppm by adopting technological solutions like carbon sequestration and by adding no more CO₂. Leaving this later rather than sooner makes it harder and potentially much more costly. "Business As Usual" will not do. The challenge is unprecedented. Leadership is required. The Antarctic Treaty system arguably provides an excellent starting point and example of intelligent co-operation for the global common good.

ANNEX I

Message from ATCM XXX to Stations in the Antarctic

Message from ATCM XXX to Stations in the Antarctic

The Thirtieth Antarctic Consultative Meeting (ATCM XXX) was hosted by the Government of India, at New Delhi, India from 30 April to 11 May 2007.

The Honourable Minister of Science and Technology and Earth Sciences, Mr Kapil Sibal, in his inaugural address drew the attention of the Delegations to the role played by the Antarctic Treaty in teaching us good governance and environmental stewardship in Antarctica, besides being a precursor to the Space Treaty. He further observed that the International Polar Year has brought countries together for the launch of a comprehensive science mission. He called upon the Antarctic Treaty Parties to cooperate in the scientific pursuit and evolve consensual scientific programmes endorsed by a mutuality of interest and to address the importance of the polar region in the context of global climate change and its impact on our environment and the human beings, going by the recent data and issues thrown up by the Inter-Governmental Panel on Climate Change.

More than three hundred delegates and experts representing over forty-six countries and organizations participated in the Meeting. During the deliberations, forty-five Working Papers and over one hundred and forty Information Papers were discussed, a record for the ATCM. The focus was on environmental protection, Antarctic tourism, global climate change and the preservation of the pristine Antarctic environment as a continent of peace and science. ATCM XXX introduced two new Antarctic Specially Managed Areas, No 5: Amundsen – Scott South Pole Station, and No 6: Larsemann Hills, East Antarctica as well as revising plans for two Antarctic Specially Protected Areas, No 109: Moe Island, South Orkney Islands, and No 129: Rothera Point, Adelaide Island. Among other measures, the Meeting adopted a Resolution recommending Parties to discourage or decline landing of passengers in the Antarctic Treaty area by ships carrying more than 500 passengers.

A special lecture on "Climate Change" by Prof. Chris Rapley, Chairman of the Scientific Committee for Antarctic Research (SCAR) and Director of the British Antarctic Survey was organized on the occasion of ATCM XXX by SCAR. The lecture was very informative on global warming and climate change and the importance of Antarctic research in continuous monitoring of climate variations.

From the capital of India – New Delhi, which is in its summer, the delegations participating in the Thirtieth Antarctic Treaty Consultative Meeting send their best wishes to all who are wintering in the Antarctic. We salute your efforts in your scientific pursuits in the pristine Antarctic continent, and in guarding the principles of the Antarctic Treaty.

Prof. U.R. Rao

Chairman of ATCM XXX – 11 May 2007

ANNEX J

Preliminary Agenda for ATCM XXXI

Preliminary Agenda of ATCM XXXI, Kiev 2008

1. Opening of the Meeting
2. Election of Officers and Creation of Working Groups
3. Adoption of the Agenda and Allocation of Items
4. Operation of the Antarctic Treaty System: Reports by Parties, Observers and Experts
5. Operation of the Antarctic Treaty System: General Matters
6. Operation of the Antarctic Treaty System: Review of the Secretariat's Situation
7. Report of the Committee for Environmental Protection
8. Liability: Implementation of Decision 1 (2005)
9. Safety and Operations in Antarctica
10. The International Polar Year 2007- 2008
11. Tourism and Non-Governmental Activities in the Antarctic Treaty Area
12. Inspections under the Antarctic Treaty and the Environment Protocol
13. Science Issues, Including Climate-related Research, Scientific Co-operation and Facilitation
14. Operational Issues
15. Education Issues
16. Exchange of Information
17. Biological Prospecting in Antarctica
18. Preparation of the XXXII Meeting
19. Any Other Business
20. Adoption of the Final Report
